

OPTIMIZE DEFINE MANAGE

Looking to **optimize** resources? **Define** roles and responsibilities of the organization, management, and employees, and create a proactive approach to **managing** safety and risk.

Why an SMS?

A safety management system (SMS) is an organizational tool that manages safety and risk. An SMS helps evaluate all safety issues, concerns, and meet safety regulations, industry certifications, and company-specific policies and procedures.

Designed to help organizations:

- Prevent workplace injuries and illnesses
- Ensure compliance with laws and regulations
- Reduce costs (lost time / worker's comp)
- Engage workers
- Increase productivity and enhance company culture

SMSs work best when:

- Safety management activities are documented
- Hazards are analyzed with impact communicated
- Mitigation actions are developed and implemented
- Reporting systems are in place

What is included in the intRAtrain SMS (Keys of Safety)?

intRAtrain™ “Keys of Safety” is the approach to managing and developing a safety culture by focusing efforts and resources on factors that count most towards preventing injuries and illnesses. It also provides a tool for measuring performance in areas where the only data is “after-the-fact”! Keys of Safety is a process with a definite planned and organized effort, whose purpose is to support all personnel to work in a cooperative effort to prevent accidents.

The system includes tools that help with:

 Strategic Planning

 Compliance

 Safe Practices

 Hazard Identification

 Training

 Behavioral Safety

 Performance Tracking

Employee Safety Risk Management

intRAtrain Safety: intRAtrain Safety Essentials Course library contains content made for Agriculture, Food, and supporting industries. Courses are designed with the industry in mind while also including specific targeted features designed to meet the needs of today's adult learners.

All of the intRAtrain Safety Essentials catalog courses are customizable and can be used in individual and group training. Each segment of courses includes awareness level safety training designed for employee training, refreshers, and toolbox talk sessions.

Data and Document Management

intRAtrain Learning Management System- the LMS helps manage online, classroom, small groups, coaching, job observations, and paper-based training.

IntRAtrain Document Asset Management- the system helps manage and control access to documents, resources, procedures, policies, SOPs, etc. All resources are searchable and filterable for easy access and management.

Safety Inspection and Audit Management

inspectiTRAC- Safety Hazard Inspection and Audit Management Software is used for data collection, tracking, and management. The Corrective Action Management Tool assigns responsibility for resolving failures discovered during observations, inspections, and audits.

- Safety Assessment / Audit
- Behavior-Based Safety Observation Program
- Safety Hazard Inspection and Audit Management Software
- Corrective Action Management Tool

Incentives- Can be used to help motivate and reward employees. They can be used with specific components of the SMS or as part of an overall system.
